

### SEE HOW IT WORKS

Scan the QR code for a close-up look at MultiMatch Flow Chameleon Antimicrobial Composite. It delivers esthetic restorations while helping to reduce bacterial load and demineralization, supporting healthier restorations that stand the test of time.

## PREMIER DENTAL

# MultiMatch Flow with BioArmor

*A game-changing composite offers antimicrobial protection while delivering esthetic, resilient restorations*

**T**o be go-to's in today's operatories, composites must be durable and esthetic, with handling that boosts efficiency and makes dentists' jobs easier. It's a tall order, but if you ask John Gammichia, DMD, FAGD, MultiMatch Flow Chameleon Antimicrobial Composite hits all of those marks—and then some. Thanks to Premier's BioArmor Antimicrobial Protection, a unique formulation that supports healthier, more resilient restorations, Dr. Gammichia believes MultiMatch Flow is a "game-changing" solution that could turn the tide in restorative dentistry.

"When I tried MultiMatch Flow, I thought, 'Wow, this does everything it says it does, and it has the antimicrobial protection against microorganisms that make up biofilm,'" shared Dr. Gammichia. "I believe it's the first of its kind to offer that."

### Protects Against Bacteria & Demineralization

BioArmor Antimicrobial Protection lowers bacterial loads and reduces demineralization with a built-in defense against acid challenges.\* The antimicrobial-infused silica is effective against the bacteria, fungi, and viruses that make up biofilm.

"We don't want patients to lose their teeth, but unfortunately, once we cut into a tooth, we've opened the door to secondary decay 10 or 15 years later when we find ourselves doing a bigger filling on the same tooth," he said. "And that might eventually lead to root canals or crowns. If a filling material can strengthen the tooth, it means we can wait more years before the next filling on that same tooth—and I think MultiMatch Flow might have that ability."

## SEE THE (NEW) LIGHT

The just-released, ergonomic Lumira LED Curing Light delivers a collimated, uniform beam of light for a reliable depth of cure—even in deep restorations. Here's a peek:

- Broad wavelength range of 440 to 490 nm
- Up to 3,000 mW/cm<sup>2</sup> irradiance for rapid curing
- Lightweight, all-metal construction
- Low-profile head with 360° rotation
- 7 clinical modes

### Single-Shade Matching, Self-Leveling

With a nanohybrid formulation for optimized handling, MultiMatch Flow offers easy-flowing placement and adaptation, low shrinkage, and strong physical properties for marginal integrity and long-term durability. Proprietary EZ-Blend Shade Simplicity offers a single universal shade that matches 16 VITA shades.

"It's easy to use, self-leveling, flows and polishes well, and the color match is on point," Dr. Gammichia shared. "I've been using flowables for 30 years now, so when something's better, it stands out. With MultiMatch Flow, I didn't have to manipulate at all. It's made things a little easier for me."

"I want to have an impact on my patients," he added, "and as I look back, we are definitely getting better. We are saving so many people's teeth, and I think MultiMatch Flow is the next generation of that."
