PremierAir®

Hygiene and Diagnostic Instruments

- Comfortable, balanced, ergonomic handle with non-slip grip means less pressure to maintain control and less hand fatigue
- Exceptionally light, rugged polymer handles and tested extensively to ensure a long working life
- Made to high standards by master craftspersons

Hygiene Instruments

- Precision tips made with 440A stainless steel and SmartSharp® Technology keep edges sharp and well defined

Probex and Explorers

- Probes are easy to read and resistant to wear
- Explorers have excellent tactile sensitivity and sharp points for easy detection of tooth texture and surface irregularities

new! Titanium Implant Scalers

- Optimal working edges, to remove plaque, calculus, and biofilm safely & effectively
- High Quality: medical grade titanium alloy working ends; matching implant material for safe, non-scratching maintenance of implant abutments and threads

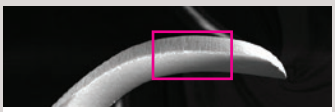

Premier® SmartSharp® Technology

Premier's innovation in sharpening technology allows you to start sharp and work smart:

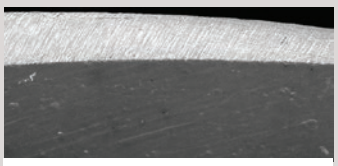

- Easily maintain sharpness – proprietary process ensures a well defined edge you can easily re-sharpen as needed
- Apply less pressure and use fewer strokes – achieve a glass-like tooth surface
- SmartSharp® available on Premier Scalers and Curettes – at no additional cost

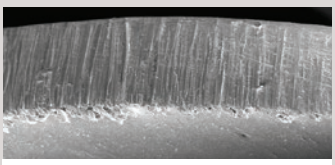

Premier® Instrument Edge

Leading Competitor Edge

A sharp edge ensures a smooth, precise cut with less hand fatigue.

An irregular edge is less efficient and can lead to more hand fatigue.

Gracey

Big Easy® Ultralite™ (BEUL)
1/2" diam.,16g

Gracey 11/12 **BEUL** • 05611 **PremierAir** • 1004665
Triple angulation for easy access to buccal/mesial and lingual/messial surfaces of premolars and molars

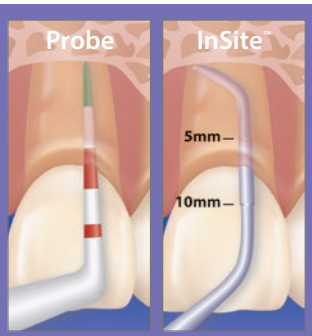

Gracey 13/14 **BEUL** • 05613 **PremierAir** • 1004666
Triple angulation for easy access to distal/posterior surfaces of premolars and molars

Gracey 15/16 **BEUL** • 05653
Angled shank, designed to reach mesial surfaces of posterior teeth

Gracey 17/18 **BEUL** • 05655
Highly angled shank for reaching distal surfaces of posterior teeth

After probing, InSite™ scalers provide added visual confirmation that you have reached the base of the pocket.

Gracey Variations

Pocket Scalers (PS) and Mini Pocket Scalers (MPS) have a slender and longer terminal shank to provide access into deeper pockets. MPS has the same slender tip design as PS, but with half the blade length. InSite PS and MPS have a depth gauge at 5mm through 10mm offering an excellent visual guide.

Big Easy Ultralite Pocket Scalers (PS) and Mini Pocket Scalers (MPS) do NOT feature the depth gauge found in InSite Scalers

Rigid Gracey designs have a thicker shank than the original Graceys, but are overall slightly shorter for increased strength when removing heavy calculus.

CCI and CMI Anodized aluminum on CMI and CCI instruments provides even greater lubricity to virtually eliminate composite sticking. The black coating does not abrade to discolor the restoration.

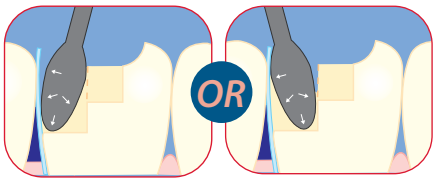

Composite Contact (CCI)

CCI Small/Med • 1003899

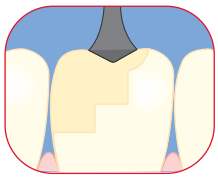

CCI Med/Lrg • 1003900

CCI technique

After placing composite into box, insert instrument tip into the composite, torque into position and apply gentle pressure to adjacent tooth for desired positive contact. Light-cure composite, making sure composite is not overfilled to lock in instrument.
As recommended by Dr. Brian Wilk.

CMI technique

Acorn Carver (21B) is helpful in establishing anatomical contours, prior to carving.

79S and 80S Extra-Fine Apical Root Tip Picks/Elevators

These extra-slender tips can gently slide between the residual tip and the alveolar socket wall. With a back-and-forth motion, the tips are worked into position; a careful lateral movement then will engage the tip. With an occlusal-ward action, the root tip can often be released from its apical position in the socket. The set of three Root Tip Picks provides angulations to enable the dentist to reach all areas of the mouth.
